

Product Requirements Document (PRD) for Customer Site

Customer Dashboard

1. What It Does:

The Customer Dashboard serves as the **primary landing page for customers after logging into the Bloom365 customer portal**. It provides a consolidated overview of the customer's companies, application progress, service subscriptions, compliance obligations, and frequently used actions.

The dashboard is designed to help customers quickly understand the current status of their business formation and compliance processes without navigating through multiple menus.

The primary goals of the dashboard are to:

- Provide real-time visibility into application progress across customer companies
- Allow customers to resume incomplete applications directly from the dashboard
- Display key account metrics such as active services, completed applications, and applications requiring attention
- Highlight upcoming compliance deadlines and renewal dates
- Provide quick navigation to frequently used customer actions
- Surface essential operational data in a read-only format

The dashboard acts as a **monitoring and navigation interface** rather than a transaction interface. While users can navigate to other menus from the dashboard, most data displayed on this page is informational and cannot be modified directly.

2. Who Can Use It:

The Customer Dashboard is accessible to **all authenticated customer users** within the Bloom365 customer portal.

Unlike administrative modules, the dashboard **does not rely on role-based permission configuration**. Every customer user will see the dashboard upon successful login.

Access rules include:

- The user must be authenticated
- The user must belong to a valid customer account
- The user must have access to the customer portal

The dashboard itself does not enforce role restrictions, but the **data displayed is always scoped to the logged-in customer account.**

3. Who Does It Apply To:

The dashboard applies to the following user type:

- Customers
- Business owners managing companies through Bloom365
- Authorized users associated with a customer account

All customer users experience the same dashboard layout and structure.

However, the **content displayed varies dynamically based on the companies, applications, services, and documents associated with the customer account.**

4. Preconditions:

Before a user can access the Customer Dashboard, the following conditions must be met:

- The user must have a valid Bloom365 customer account
- The user must successfully authenticate into the customer portal
- The customer account must be linked to at least one company record
- Applications, services, documents, or compliance records may exist to populate dashboard data

If the customer account contains limited or no data, the dashboard will still render and display appropriate empty or zero states.

5. Expected Behavior:

5.1 Login & Landing

1. The customer enters valid login credentials.
2. The system authenticates the user.
3. The user is redirected to the Customer Dashboard.
4. The dashboard loads data associated with the customer account.
5. Dashboard components render dynamically based on available data.

5.2 Welcome Section

The dashboard displays a personalized greeting to the logged-in user.

Displayed information includes:

- A welcome message containing the user's name
- A summary message indicating the number of incomplete applications

Example behavior:

- If incomplete applications exist, the dashboard displays the total count requiring attention
- If no incomplete applications exist, a confirmation message may be displayed

5.3 Application Progress Section

The dashboard displays a list of companies with ongoing or previously submitted applications.

Each entry in this section includes:

- Company name
- State and entity type (for example LLC, Corporation, Non-Profit)
- A visual progress bar indicating completion percentage
- A completion percentage value
- A **Resume Form** action button

Behavior:

- Each company entry represents an application workflow associated with that company

- The progress bar reflects the percentage of completed steps in the application process
- Completion percentages range from 0% to 100%
- Customers can continue unfinished applications by clicking **Resume Form**

Resume Form behavior:

1. The user clicks the Resume Form button.
2. The system redirects the user to the corresponding application form.
3. The application resumes from the last saved step.

This section allows customers to easily continue working on partially completed applications.

5.4 Summary Metrics Section

Below the application progress section, the dashboard displays several summary metric cards.

These cards provide quick insight into the customer account status.

The dashboard currently displays the following metrics:

Active Services

- Displays the total number of services currently active for the customer.
- Examples include:
 - Registered Agent services
 - EIN registration services
 - Annual report filing services
- The card may also display a status indicator such as:
 - “All up to date”

Completed Applications

- Displays the number of applications that have been fully completed.
- Examples include:
 - Completed company formations
 - Completed compliance filings
- The card may display confirmation indicators such as:
 - “All up to date”

In-Progress Applications

- Displays the number of applications that are currently incomplete or require additional steps.
- The card highlights when action is required.
- Example indicator:
 - “Needs attention”

Government Issued Documents

- Displays the number of documents that are issued by the government for the companies that the customer is handling

5.5 Active Services Section

The dashboard includes a section listing of active services linked to the customer account.

Each entry includes:

- Company name
- Service name

Examples of services displayed:

- Registered Agent
- EIN Registration
- Annual Report Filing

This section allows customers to quickly see which services are active for their companies.

5.6 Renewal Dates Section

The Renewal Dates section displays upcoming service renewals and compliance deadlines.

Each entry includes:

- Company name
- Service or compliance requirement
- Renewal or filing date

Examples include:

- Annual Report Filing deadlines
- Registered Agent renewal dates

This section helps customers stay aware of upcoming regulatory requirements.

5.7 Quick Actions Section

The dashboard includes a **Quick Actions panel** that provides shortcuts to frequently used actions.

Available quick actions include:

View Subscription

Redirects the user to the **Subscription menu**, where they can view subscription plans and service details.

Download Documents

Redirects the user to the **Documents menu**, where available documents can be downloaded.

Update Payment

Redirects the user to the **Billing section**, where payment methods can be updated.

Edit Profile

Redirects the user to the **Profile Settings page**, allowing the user to update personal information.

6. Constraints:

The dashboard operates under the following constraints:

- The dashboard is primarily read-only
- Most data cannot be edited directly from the dashboard
- The dashboard layout cannot be customized by users
- Data displayed depends entirely on underlying system modules
- Application progress values must not exceed 100%

- Dashboard widgets display only customer-specific data

7. Integration Points

The Customer Dashboard integrates with several system modules.

Authentication Module

Provides login validation and session management.

My Companies Module

Provides company data used in the application progress section.

Orders / Applications Module

Provides application progress information.

Subscription Module

Provides active service information.

Documents Module

Provides document counts and downloadable documents.

Billing Module

Provides payment update functionality.

Compliance / Service Management Modules

Provide renewal dates and compliance obligations.

8. Quality Standards:

Performance

- Dashboard should load within **2 seconds** under normal conditions
- Metrics and widgets should render asynchronously where possible

- Partial data failure should not block entire dashboard rendering

Security

- Dashboard accessible only to authenticated users
- Data scoped strictly to the logged-in customer
- No cross-customer data leakage

Reliability & Usability

- Graceful empty-state handling when data is unavailable
- Clear messaging for attention-required items
- Consistent visual hierarchy and spacing

My Companies

1. What It Does:

The **My Companies** module is the central workspace where customers can view and monitor all companies associated with their Bloom365 account.

It allows customers to:

- View all companies assigned to their account
- Access detailed information for each company
- Track company formation and compliance progress
- Review services linked to the company
- View and download company documents
- View participants associated with the company (members, managers, shareholders, etc.)
- Upload required company documents

This module acts as the **primary navigation point for all company-related information** in the customer portal.

Customers **cannot create or delete companies** from this module. The module is primarily designed for **visibility, document interaction, and navigation to related information**.

2. Who Can Use It:

- The My Companies menu is accessible to **all authenticated customer users**
- There are **no role-based, license-based, or permission-based restrictions**
- The menu cannot be hidden or disabled for any logged-in customer

Every customer user has identical access to this menu.

3. Who Does It Apply To:

This menu applies to:

- **End customers / business owners / authorized customer users**

There are:

- No permission flags
- No role differentiation
- No conditional UI rendering based on access level

All content visibility is driven purely by **data ownership and assignment**, not permissions.

4. Preconditions:

Before accessing the My Companies menu:

1. The user must have a **valid Bloom365 customer account**
2. The user must be **successfully authenticated**
3. At least one company must be:
 - a. Assigned to the user, or
 - b. Created on behalf of the user

If no companies exist, the system should display a **clear empty-state message**.

5. Expected Behavior:

5.1 Accessing My Companies

1. The user logs into the Bloom365 customer portal.
2. The user selects **My Companies** from the left navigation menu.
3. The system displays a **company listing page** containing all companies associated with the customer account.

Each company is displayed as a **company card**.

Each company card includes:

- Company Name
- Company Status Indicator (example: New)
- State or Jurisdiction of registration
- Formation or registration date
- Entity Type (example: LLC, C-Corp)
- **View button**

The companies are displayed in a **grid-style layout of cards**.

Behavior:

- Each card represents a company associated with the customer account.
- Company data is **read-only on this page**.
- The page serves as a **navigation gateway to detailed company information**.

5.2 Opening Company Details

To view company details:

1. The user clicks the **View** button on a company card.
2. The system navigates to the **company detail page**.

The company detail page contains:

- Company header section
- Company information tabs

5.3 Company Detail Header

The company detail page displays a header containing key company information.

The header includes:

- Company name
- Company avatar or initials
- Company status indicator (example: New, Active)
- Jurisdiction / State of registration
- EIN status (if available)
- Company creation or formation date

This header **remains visible across all tabs**.

5.4 Company Tabs Overview

Each company detail page contains the following tabs:

- Overview
- Structure

- Services
- Participants
- Documents

Each tab displays different categories of information related to the selected company.

5.5 Overview Tab

The **Overview tab** displays high-level company information and metrics.

Summary Cards

The following summary cards appear:

- Members / Owners Count
- Active Subscriptions Count
- Documents Count
- Compliance Status Count

These values are dynamically calculated based on system data.

Company Information Section

Displays company registration details including:

- Legal Business Name
- DBA Name (if applicable)
- Entity Type
- Registered Agent details
- Principal Place of Business

Registered agent information may include:

- Agent company name
- Address
- Phone number
- Email address

All information in this section is **read-only**.

Compliance Status Section

Displays compliance obligations for the company.

Each compliance item includes:

- Compliance requirement name (example: Franchise Tax Filing)
- Compliance due date
- Completion status

This section allows customers to **track regulatory deadlines**.

5.6 Structure Tab

The **Structure tab** displays ownership and organizational structure for the company.

This section focuses primarily on **Members / Owners information**.

Each member card may include:

- Member name
- Email address
- Phone number
- Address
- Role indicator (example: Managing Member)

The structure tab helps customers view **ownership relationships and member roles within the company**.

This section is **informational and read-only**.

5.7 Services Tab

The **Services tab** displays services associated with the company.

Current Services Table

Columns include:

- Service Name
- Start Date

- Expiry Date
- Status
- Action (View)

Example services include:

- EIN Registration
- Registered Agent
- Operating Agreement
- Annual Report Filing
- Trademark Registration
- Certificate of Good Standing
- Tax Consultation
- Logo Design

Behavior:

Services may contain pagination when the list is large.

Clicking the **View icon** allows the user to view service details.

Customers **cannot edit or modify services** from this tab.

5.8 Participants Tab

The **Participants tab** displays individuals or entities associated with the company.

Participants may include:

- Members
- Managers
- Directors
- Officers
- Shareholders
- Registered Agents
- Responsible Parties (EIN)

Participants are categorized into two types:

- Individual

- Entity

Participant Filters

Users can filter participants using:

Role Filter

Available roles:

- Member
- Manager
- Director
- Shareholder
- Officer
- Registered Agent
- Responsible Party (EIN)

Type Filter

Options include:

- Individual
- Entity

Participant Search

Users can search participants using a **search input field**.

The search filters results based on participant name.

Participant Table

The participants table includes the following columns:

- Name
- Type
- Roles
- Ownership Percentage
- Nationality

- Address
- Status
- Actions

Status indicators may include:

- Active
- Removed

Participants are **read-only in the customer portal**.

5.9 Documents Tab

The **Documents tab** displays documents associated with the selected company.

Documents may originate from:

- Government agencies
- Bloom365 system processes
- Customer uploads

Document Filters

Users can filter documents using the following filters.

Category Filter

Options include:

- Government Issued
- Client Uploaded
- Internal

Document Type Filter

Available types include:

- Address Proof
- Billing Record
- Business License
- Certificate of Formation

- Compliance Check
- EIN Confirmation Letter
- Passport / ID
- Signed Operating Agreement

Source Filter

Document sources include:

- API (Registered Agents Inc)
- Manual Upload
- Customer Portal

Document Search

Users can search documents using a **search input field**.

The search filters results based on document name.

Document Table

The documents table contains the following columns:

- Document Name
- Document Type
- Category
- Issued By
- Issue Date
- Source
- Actions

Viewing Documents

Each document row contains an **eye icon** in the Actions column.

When the user clicks the eye icon:

1. The document opens in a **new browser tab**.
2. The file is displayed using the **browser's default document viewer**.
3. The original Bloom365 portal tab remains open.

This allows users to **view documents without leaving the portal page**.

Upload Document

Users can upload documents for the company using the **Upload Document button**.

Clicking this button opens the **Upload Document modal**.

Upload Document Modal Fields

The form includes:

- Document Name (required)
- Document Category (default: Client Uploaded)
- Document Type (required)
- Company (auto-filled)
- Issued By
- Issue Date
- Source (default: Manual Upload)
- Upload File (required)

Files can be uploaded by:

- Selecting a file from the system
- Dragging and dropping a file into the upload area

Upload Actions

Users can:

- Cancel upload
- Upload the document

After successful upload:

- The document appears in the **Documents table**.

6. Constraints:

The My Companies module has the following constraints:

- Customers cannot create or delete companies
- Company information is mostly read-only
- Participants cannot be modified by customers
- Company structure changes are managed by the admin portal
- Documents uploaded must comply with system file restrictions
- Some documents may originate from external APIs and cannot be edited

7. Integration Points:

The My Companies module integrates with several system modules.

Authentication Module

- Controls user login and session access.

Admin Company Management

- Provides company records displayed to customers.

Orders / Applications Module

- Provides company formation progress.

Service Management Module

- Provides company services displayed in the Services tab.

Documents Module

- Provides document storage and document retrieval.

Compliance Module

- Provides compliance status information.

8. Quality Standards:

Performance

- Company list should load within **2 seconds**

- Company detail tabs should load within **2–3 seconds**
- Document uploads should complete without page refresh

Security

- Only authenticated users can access the module
- Customers can only view companies linked to their account
- Uploaded documents must be securely stored

Reliability & Usability

- The system must handle empty states gracefully
- Filters must return accurate results
- Upload errors must show clear error messages
- Document downloads must complete successfully

My Orders

1. What It Does

The **My Orders** menu allows customers to view, track, and access all services they have purchased through the platform.

It acts as a **self-service order tracking dashboard** where customers can:

- See all orders and their status
- Create a new order
- Open an order and monitor progress
- View ordered services and timelines
- Access business formation details
- View members/directors' information
- Download uploaded documents
- Check payment summary and billing details

This eliminates the need for manual support for follow-ups and improves transparency.

2. Who Can Use It

- Logged-in customers

- Business owners
- Authorized company members invited to the portal
- Customers who purchased services (formation or additional services)

Not accessible to:

- Guests
- Admin users (they use Admin Portal)
- Customers without any orders

3. Who Does It Apply To

Applies to customers who:

- Purchased company formation
- Purchased non-profit formation
- Purchased business services
- Purchased add-ons (EIN, Operating Agreement, Compliance, etc.)

Each customer only sees **their own orders**.

4. Preconditions

Before accessing My Orders:

1. Customer account must exist
2. Customer must be logged in
3. At least one order must be created
4. Order must belong to that logged-in customer
5. Services must be linked to the order
6. Documents (if any) must be uploaded to storage
7. Permissions must be validated

5. Expected Behavior

A. Create Order for Company Formation

Order Flow Steps

- **Select service type**

- The user begins the order by choosing what kind of business formation they want to create
 - Company Formation (LLC, C-Corp, S-Corp, Non-Profit).
 - Non-Profit Formation (Register a non-profit organization with tax-exempt status)
 - Other Business Services (Additional services for your existing business)
- Based on this selection, the system prepares the correct legal workflow, required fields, and pricing logic for that entity type.
- Select a Company Formation Flow

- **Select package**

- The system displays available packages (Starter, Essential, Premium, etc.) for the selected service type.
- Each package includes a predefined bundle of services and pricing.
- When a package is selected, the system loads its included services and updates the base order cost.

- **Enter business details**

- The Business Details step collects the core legal identity of the company being formed.
- The information entered here determines the formation of filing structure, state compliance requirements, and naming validation rules.

Field Behavior

- **Entity Type**

The user selects the legal structure (LLC, Corporation, Non-Profit, etc.).

This selection dynamically controls:

- Allowed suffix values
- Required ownership fields in later steps
- Compliance rules and filing documents

- **State**

The user selects the formation state.

The system uses this to:

- Load state filing fees
- Apply naming regulations
- Determine compliance schedule

- **Desired Business Name**

The user enters the primary legal company name.

The system validates format and prevents restricted naming patterns based on state rules.

- **Alternate Name / DBA**

Optional secondary operating name.

Stored for documentation and filing where applicable.

- **Suffix**

Required legal identifier (LLC, Inc, Corp, Ltd, etc.).

Available options depend on the selected entity type.

- **NAICS Code**

User searches and selects industry classification.

Used for regulatory filings and reporting classification.

- **Business Activity**

The user provides a description of the company's purpose.

Included in the formation of documentation where required by jurisdiction.

Validation Rules

- Mandatory fields must be completed
- Entity must be selected before suffix
- NAICS must be selected from search list (no free text)

Select/create customer

- This step associates the company formation order with a specific person or business owner.
- The selected customer becomes the legal contact, communication recipient, and account holder for the order and future compliance activities.
- The user can either select an existing customer record or create a new one.

Customer Selection Options

- **New Customer**
Allows entering fresh customer details.
Used when the person placing the order does not yet exist in the system.
- **Existing Customer**
The user searches and selects a previously created customer.
The system automatically loads saved contact details.

Field Behavior

- **First Name & Last Name**
Identifies the primary owner/contact person for the order.
- **Email Address**
Used for:
 - Order confirmations
 - Filing updates
 - Compliance notifications
 - It must be unique for new customers.
- **Phone Number**
Stored for operational communication and verification if needed.
- **Address Line 1 & 2**
Customer's primary mailing address for records and documentation.
- **City, State, Country, ZIP Code**
 - Used for identity verification and regulatory requirements.

Communication Preferences

- **Send account setup invitation to customer**
If enabled, the system sends a portal access email after order creation.
- **Receive tips and updates**
Opt-in for marketing or informational communication.

Validation Rules

- Mandatory contact fields must be completed
- Email must be valid format
- Existing customer selection prevents duplicate creation

- Address fields required for formation records

Choose registered agent

- It allows users to choose who will act as the **Registered Agent** for the business during the company formation process.
- A registered agent is responsible for receiving:
 - Legal documents
 - Government notices
 - Service of process
 - Compliance communications from the state
- Users can either select the **Bloom365 Registered Agent Service** or provide details for **their own registered agent**.
- This step captures the legally required registered agent for the company. A registered agent is the official recipient of government notices, legal documents, and compliance with correspondence from the Secretary of State.
- The user can either appoint Bloom365 as the agent or provide their own third-party agent.

Option 1: Bloom365 Registered Agent Service (Recommended)

- Bloom365 provides a registered agent service that handles official correspondence and legal documents.
-
- Features include:
 - Receiving legal mail on behalf of the company
 - Keeping the user's personal address private
 - Ensuring compliance with state requirements
 - **Pricing** - \$149 per year
- When this option is selected:
 - Registered Agent Name is automatically filled as **Bloom365 Registered Agents LLC**
 - The field becomes **read-only**
 - The system automatically manages agent information.

Option 2: My Own Agent

- Users may choose to act as their own registered agent or appoint a third-party agent.
- Requirements:
- The agent must have a **physical address in the state of formation**
- The agent must be available during normal business hours
- When this option is selected:
- The user must manually enter the agent for information.
- Fields include:
- Registered Agent Name
- Legal name of the individual or company acting as the agent.
- State of Registration
- Must match the state where the company is being formed.

Agent Details Section

- This section collects the required registered agent information.

Registered Agent Name

- The legal name of the individual or entity acting as the registered agent.
- Behavior:
- Auto-filled and locked if Bloom365 Service is selected
- Editable if My Own Agent is selected

State of Registration

- The state where the registered agent is registered to operate.
- Rules:
 - Must match the selected **formation state**
 - Selected from a dropdown list

Validation Rules

- Only one registered agent option can be selected.
- The registered agent must have a physical address in the formation state.
- State of Registration must match the selected formation state.

- If "My Own Agent" is selected, the Registered Agent Name is mandatory.
- Users cannot proceed without selecting a registered agent option.

Add additional services

- This step presents optional add-on services that enhance the company after formation.
- These services are not required to complete incorporation but provide compliance support, branding assistance, and regulatory maintenance.
- The user can selectively add any number of services to the order before checkout.

Service Selection Behavior

- Each service is displayed as a card containing:
 - Service name
 - Price
 - Short description
 - Promotional badge (if applicable)
 - **Add to Cart** action
- When the user clicks **Add to Cart**:
 - The service is attached to the order
 - The order total updates in real time
 - The service will appear in the order summary
- Users may select multiple services or skip entirely.

Examples of Add-on Services

- Annual Report Filing
- Trademark Registration
- Certificate of Good Standing
- Tax Consultation
- Logo Design

Validation Rules

- No mandatory fields in this step
- Duplicate service addition prevented

- Only active services from catalog are selectable

EIN Application Details

- This step collects the information required to apply for an **Employer Identification Number (EIN)** with the IRS.
- If the customer chooses EIN filing, the system gathers the necessary data and prepares IRS Form SS-4 for submission.
- This step ensures the business receives a valid tax identification number required for taxation, hiring employees, and opening business bank accounts.
- It is applicable only when the EIN service is selected as part of the formation order.
- The EIN Application step will be enabled only if:
 - The selected formation package includes EIN service, or
 - The user adds EIN service through Additional Services.

Step Information Display

- The system displays formation details automatically, including:
 - Legal Name
 - Entity Type
 - State
 - Member count
 - Tax classification
- These values are synced from the formation data.

Responsible Party

- User must select the Responsible Party.
- IRS rule:
 - An individual who controls the business must act as the responsible party.
- Fields:
 - Select Individual (from formation participants)
 - SSN / ITIN
 - Checkbox if individual does not have SSN or ITIN
- The party responsible must be an individual, not a company.

Business Physical Address

- Users must provide the primary business operating address.
- Fields include:
 - Street Address
 - City
 - State
 - ZIP Code
 - County
- Address may be synced automatically from formation details, but users may modify it if required.

Principal Business Activity

- This section defines the business activity reported to the IRS.
- Fields:
 - Reason for applying (default: *Started a new business*)
 - Business Description
 - Accounting Year End
- This information is used for IRS classification of business activity.

Principal Business Activity

- This section defines the business activity reported to the IRS.
- Fields:
 - Reason for applying (default: *Started a new business*)
 - Business Description
 - Accounting Year End
- This information is used for IRS classification of business activity.

Special IRS Requirements

- Users must answer IRS compliance questions.
- Questions include:
 - Has this business entity ever applied for an EIN before?
 - Does the business involve alcohol, tobacco, or firearms?
 - Is the business required to file federal excise taxes?

- These questions help determine additional IRS filing requirements.

Review & Sign

- Users must review the EIN application and provide confirmation details.
- Fields:
 - Primary Contact Name
 - Email for EIN delivery
 - Phone Number
 - Date
- User must also check the Signature Declaration confirming the accuracy of the information.

Review order summary

- This step presents a complete financial and service breakdown of the company's formation order before collecting final business information and payment.
It allows the user to verify selected packages, add-ons, pricing, and discounts.
- The goal of this step is transparency — the user clearly understands what they are purchasing and the total cost.

Information Displayed

Company Overview

- Company Name
- Customer Email
- Formation State

Selected Package

Displays the chosen formation package and its base price.

Add-On Services

Lists all optional services selected in the previous step.

Each item includes:

- Service name

- Short description
- Individual price
- Remove option
- Remove a service update total instantly.

Pricing Breakdown

- The system calculates and displays:
- Subtotal (package + add-ons)
- Applied discount (if applicable)
- Final payable total
- All calculations update dynamically when services are removed.

Validation Rules

- At least one package must exist
- Totals must calculate successfully before proceeding
- Removed services cannot appear in final payment

Business Information

- This step collects the official operational address, ownership structure, and responsible individuals required for legal company registration.
- The data entered here is used in the formation of documents submitted to the state and must meet regulatory requirements.

Business Address

- The user enters the company's primary operating address.
- **Fields**
- Address Line 1
- Address Line 2
- Country (defaulted to formation country)
- State
- ZIP Code
- This address becomes part of the legal filing record unless state rules require a separate mailing address.

LLC Flow

- **Business Management Structure**
- This section allows the user to define how the LLC will be managed.

Available Options

- **Member-Managed**
All LLC members are responsible for managing business operations.
- **Manager-Managed**
Selected managers are responsible for managing the business, while other members act as passive owners.

Behavior

- Users must select **one management structure**.
- The selected option determines which roles must be assigned later in the process.
- Based on the selection:
 - **Member-Managed** → Members manage operations.
 - **Manager-Managed** → Managers must be specified in the Managers section.
- **Members (Owners)**
- This section defines the **ownership structure of the LLC**.
- Initially, no members are assigned, and the **Ownership Allocation bar shows 0.0% allocated**.
- The user must add at least one member before proceeding.

Ownership Allocation

- The system dynamically calculates ownership percentages.
- Features available:
 - **Single Owner (100%)**
 - **Equal Split**
 - **Manual Ownership Assignment**

- The progress bar displays the percentage of ownership allocated among all members.
- Validation rule:
- Total ownership must equal **100%**.
- If ownership does not equal 100%, the system will prevent progression.
- Users can click **Add Member** to open the **Add LLC Member modal**.
- This modal allows users to either:
- Select an **existing person from the company directory**, or
- Create a **new member**.
- Add LLC Member Modal
- **Select from Company Director**
- Users can select an existing participant from the company directory.
- Dropdown options include:
- Existing members
- Option to **Create New Participant**
- Selecting an existing participant automatically fills out known details.

Identity Details

- This section collects personal information for the LLC members.
- **Fields**
- **First & Last Name**
Legal name of the LLC member.
- **Date of Birth**
Required for identity verification and regulatory compliance.
- **Email**
Used for notifications and communication.
- **Phone**
Contact number for operational communication.
- **Residential Address**
Primary address of the member.
- **Country of Citizenship**
- This determines which identity document is required.

Conditional Fields

- **SSN (Social Security Number)**
Required when the country of citizenship is:
 - U.S. Citizen
 - U.S. Permanent Resident
- **Passport Number**
 - Required when the member is a **Non-U.S. person**.
- **Role Specifics**
 - This section defines the member's role and ownership details within the company.

Fields

- **Ownership %**
Specifies the percentage of ownership held by the member.
- System validation ensures:
 - Ownership values across all members equal **100%**.
- **Capital Contribution (\$)**
The amount of money or assets contributed by the member to the company.
- **Role / Title**
Optional field to define the member's role within the company (e.g., Managing Member, Investor).
- **Supporting Documents**
 - Members may upload identification or verification of documents.

Fields

- **Document Type**
 - Examples:
 - Passport
 - Driver License
 - National ID
- **Document Number (Optional)**
 - Reference number of documents.
- **File Upload**
 - Accepted file formats:

- PDF
- JPG
- PNG
- Users must click **Upload** to attach the document.
- Uploaded documents appear in the list below the upload section.
- **Actions**

Cancel

- Closes the modal without saving.

Save to Directory & Assign Role

- Saves the member to the **company directory**.
- Assigns the member to the **LLC ownership structure**.
- Updates the **Ownership Allocation bar**.

Managers (Only if Manager-Managed)

- The **Managers section** appears when the user selects **Manager-Managed** as the Business Management Structure.
- In this structure, designated managers are responsible for managing the company's operations, while members act primarily as owners.
- Users must add at least one manager before proceeding.

Add Manager

- Users can click **Add Manager** to open the **Add LLC Manager modal**.
- The modal allows users to either:
- Select an **existing participant from the company directory**, or
- Create a **new participant**.
- Once saved, the manager is added to the **Managers list**.

Select from Company Directory

- Users can select an existing participant from the **Company Directory dropdown**.
- Options include:

- Existing participants already saved in the directory
- **Create New Participant**
- If an existing participant is selected, available details will auto-populate.

Identity Details

- This section captures personal identification information of the manager.

Fields

First & Last Name

- Legal name of the manager.

Date of Birth

- Required for identity verification.

Email

- Used for system communication.

Phone

- Contact number for operational communication.

Residential Address

- Manager's primary address.

Country of Citizenship

- Determines which identity documents are required.

Conditional Fields

SSN (Social Security Number)

Required when the country of citizenship is:

- U.S. Citizen
- U.S. Permanent Resident

- **Passport Number**
- Required when the member is a **Non-U.S. person**.

Role Specifies

- This section defines the manager's operational role.

Fields

Title / Role

- Defines the role of the manager within the company.
- Examples:
 - Managing Member
 - Operations Manager
 - Managing Director

Primary Manager

- Checkbox to mark the manager as the **Primary Manager**.
- Rules:
 - Only **one manager can be designated as Primary Manager**.

Supporting Documents

- Users can upload identity verification documents for the manager.

Fields

Document Type

- Examples:
 - Passport
 - Driver License
 - National ID

Document Number (Optional)

- Reference number for the selected document.

File Upload

- Supported formats:
- PDF
- JPG
- PNG
- Users must click **Upload** to attach the file.
- Uploaded documents will appear in the document list below.
- **Actions**

Cancel

- Closes the modal without saving.

Save to Directory & Assign Role

- Saves the manager in the **Company Directory**
- Assigns the manager to the **Managers list**
- Updates the order draft

SCORP & CCORP FLOW

Share Structure

- Users must define the company's share structure before assigning shareholders.

Fields

- **Issued Shares**
Represents the number of shares that will be distributed among shareholders.
- **Authorized Shares**
Represents the maximum number of shares the company is allowed to issue.
- **Par Value per Share (\$)**
The minimum value assigned to each share.

Share Allocation

- The system displays a **share allocation progress bar** that shows how many shares have been assigned to shareholders.
- Rule:
- The **total allocated shares must equal the issued shares**.
- If the allocated shares do not match the issued shares, the system displays an error message and prevents the user from proceeding.

Shareholders

- Users must add shareholders who own shares in the corporation.
- Users can click **Add Shareholder** to open the **Add Shareholder modal**.

Select From Company Directory

- Users can:
- Select an existing participant from the **Company Directory**, or
- Create a **new participant**.

Identity Details

- This section captures personal information of the shareholder.
- Fields include:
- First & Last Name
- Date of Birth
- Email
- Phone
- Residential Address
- Country of Citizenship

Conditional Identity Fields

Depending on citizenship:

- **U.S. Citizen / U.S. Permanent Resident**
 - SSN is required.

- **Non-U.S. Person**
 - Passport Number is required.

Role Specifics

- This section defines the ownership structure of the shareholder.
- Field:
- **Shares Owned**
- Specifies the number of shares owned by the shareholder.
- The total shares assigned across all shareholders must equal the **Issued Shares** value.

Supporting Documents

- Users can upload identity verification documents.
- Fields include:
- **Document Type**
- Examples:
- Passport
- Driver License
- National ID
- **Document Number (Optional)**
- Reference number for the document.
- **File Upload**
- Supported formats:
- PDF
- JPG
- PNG
- Uploaded files are listed under the document section.

Directors

- Users must add directors responsible for overseeing corporate governance.
- Click **Add Director** to open the **Add Director modal**.

Identity Details

- Same identity fields as other participants.

Role Specifics

Board Role

- Defines the role of the participant on the board.
- Example:
- Director

Officers

- Officers are responsible for managing the corporation's day-to-day operations.
- Click **Add Officer** to open the **Add Officer modal**.

Identity Details

- Same identity fields as directors and shareholders.

Role Specifics

Position

- Specifies the officer's position.
- Examples:
- President
- Secretary
- Treasurer

Review application

- This step presents a consolidated, read-only preview of all information entered throughout the formation process before payment of submission.
- It allows the user to verify accuracy and legally confirm the filing details.
- No new business data is entered here — only confirmation and acknowledgement.

Information Displayed

- The system groups the information into clear sections:

Business Details

- Entity Type
- State of Formation
- Legal Business Name

Contact Information

- Customer Name
- Email Address
- Phone Number
- Editable via **Edit** action, which returns the user to the respective step.

Business Address

- Displays the company's operating address used in filing records.

Registered Agent Information

- Shows:
- Selected agent name
- Agent address
- Service selection confirmation
- Annual agent fee (if Bloom365 selected)

Ownership / Role Information

- Displays owners or managers:
- Ownership percentage
- Role in business
- Title (if provided)

Legal Confirmation

- User must:
- Enter full name as digital signature

- Confirm declaration accuracy
- Provide place and date
- This acts as an acknowledgment that submitted information is correct.

Validation Rules

- Signature required
- Date required
- Cannot proceed if mandatory sections incomplete
- Any edited data refreshes summary automatically

Choose payment option

- The Payment Options step determines **how the order will be financially completed** after the customer finishes reviewing the application. Instead of forcing immediate payment, the system provides flexible billing methods so the order can proceed based on the customer's situation or internal business workflow.
- At this stage, the order details and total amount are already finalized. The user simply chooses the preferred payment approach:

Send Invoice to Customer

- An invoice is generated and emailed with a payment link. The order waits until the customer pays.
- The platform auto-generates an **invoice number, invoice date, due date, and billing summary** based on the order.
- The user confirms or edits the **customer's email and email subject**.
- A custom message can be added to personalize communication.
- The system generates a **secure payment link** tied to this order.
- The invoice preview on the right shows exactly what the customer will receive.
- The user can attach a PDF copy and optionally send a copy to internal billing.

Bill Later

- The order is created without collecting payment immediately, allowing payment to be handled offline or at a later time.

- The system creates the order in the platform even though no payment is made.
- A **billing date** is selected to indicate when the customer should be charged or invoiced.
- The user can optionally enable a **follow-up reminder (after 7 days)** so the system notifies the team to collect payment.
- When the user clicks **Confirm Order** under *Bill Later*, the system shows a confirmation dialog to prevent accidental creation of unpaid orders.

Purpose of this screen

This popup ensures the user clearly understands that the order will be created **without collecting payment immediately** and will instead be marked for later billing.

What the popup displays

- A clear message stating the order will be created without payment
- Order summary details:
 - Order ID
 - Customer name
 - Order amount
 - Billing date (if set)
- Warning/confirmation text asking the user to verify the action

User Actions

- **Cancel** → Closes popup and returns to payment selection
- **Confirm & Create Order** →
 - Creates the order in the system
 - Marks status as *Pending Payment / To Be Billed*
 - Enables invoice generation later
 - Allows billing team follow-up based on billing date or reminder

B. Create Order for Non-Profit Formation Flow

Order Flow Steps

1. Select service type

- a. The user begins the order by choosing what kind of business formation they want to create
 - i. Company Formation (LLC, C-Corp, S-Corp, Non-Profit).
 - ii. Non-Profit Formation (Register a non-profit organization with tax-exempt status)
 - iii. Other Business Services (Additional services for your existing business)
- b. Based on this selection, the system prepares the correct legal workflow, required fields, and pricing logic for that entity type.
- c. Select a Non-Profit Formation Flow

2. Select package

- a. The system displays available packages (Starter, Essential, Premium, etc.) for the selected service type.
- b. Each package includes a predefined bundle of services and pricing.
- c. When a package is selected, the system loads its included services and updates the base order cost.

3. Organization Information

- This step collects the **legal identity details of the Non-Profit entity**.
- Everything entered here will be used to prepare incorporation documents (Articles of Incorporation) and government filings — so this is the most legally sensitive step in the wizard.

Purpose

To define **what organization is being created, where it will be registered, and what it exists for.**

The system uses this information to:

- Prepare state filing forms
- Determine eligibility for tax-exempt categories
- Populate official formation documents
- Drive compliance & reporting rules

Field Behavior

Entity Type

The system default selects as Non-Profit and locked

State

The user selects the formation state.

The system uses this to:

- Load state filing fees
- Apply naming regulations
- Determine compliance schedule

Desired Business Name

The user enters the primary legal company name.

The system validates format and prevents restricted naming patterns based on state rules.

State of Incorporation

State where the nonprofit is legally formed (may differ from operating state)

Primary Purpose

Available options depend on the selected entity type.

Mission Statement

Detailed explanation of what the nonprofit does.

Organization Type

Admin chooses one:

- Public Charity (501(c)(3))
- Private Foundation
- Other Non-Profit Type

Validations Rules

- Name required
- State required

- Organization type required
- Purpose required
- Prevent next step until valid

4. Select/create customer Tax Exempt Status

- This step associates the company formation order with a specific person or business owner.
- The selected customer becomes the legal contact, communication recipient, and account holder for the order and future compliance activities.
- The user can either select an existing customer record or create a new one.

Customer Selection Options

New Customer

Allows entering fresh customer details.

Used when the person placing the order does not yet exist in the system.

Existing Customer

The user searches and selects a previously created customer.

The system automatically loads saved contact details.

Field Behavior

First Name & Last Name

Identifies the primary owner/contact person for the order.

Email Address

Used for:

- Order confirmations
- Filing updates
- Compliance notifications

It must be unique for new customers.

Phone Number

Stored for operational communication and verification if needed.

Communication Preferences

Send account setup invitation to customer

If enabled, the system sends a portal access email after order creation.

Receive tips and updates

Opt-in for marketing or informational communication.

Validation Rules

1. Mandatory contact fields must be completed
2. Email must be valid format
3. Existing customer selection prevents duplicate creation

5. Choose registered agent

It allows users to choose who will act as the **Registered Agent** for the business during the company formation process.

A registered agent is responsible for receiving:

- Legal documents
- Government notices
- Service of process
- Compliance communications from the state

Users can either select the **Bloom365 Registered Agent Service** or provide details for **their own registered agent**.

This step captures the legally required registered agent for the company.

A registered agent is the official recipient of government notices, legal documents, and compliance with correspondence from the Secretary of State.

The user can either appoint Bloom365 as the agent or provide their own third-party agent.

Option 1: Bloom365 Registered Agent Service (Recommended)

Bloom365 provides a registered agent service that handles official correspondence and legal documents.

Features include:

- Receiving legal mail on behalf of the company
- Keeping the user's personal address private
- Ensuring compliance with state requirements

Pricing - \$149 per year

When this option is selected:

- Registered Agent Name is automatically filled as **Bloom365 Registered Agents LLC**
- The field becomes **read-only**
- The system automatically manages agent information.

Option 2: My Own Agent

Users may choose to act as their own registered agent or appoint a third-party agent.

Requirements:

- The agent must have a **physical address in the state of formation**
- The agent must be available during normal business hours

When this option is selected:

The user must manually enter the agent for information.

Fields include:

Registered Agent Name

- Legal name of the individual or company acting as the agent.

State of Registration

- Must match the state where the company is being formed.

Agent Details Section

This section collects the required registered agent information.

Registered Agent Name

The legal name of the individual or entity acting as the registered agent.

Behavior:

- Auto-filled and locked if Bloom365 Service is selected
- Editable if My Own Agent is selected

State of Registration

The state where the registered agent is registered to operate.

Rules:

- Must match the selected **formation state**
- Selected from a dropdown list

Validation Rules

- Only one registered agent option can be selected.
- The registered agent must have a physical address in the formation state.
- State of Registration must match the selected formation state.
- If "My Own Agent" is selected, the Registered Agent Name is mandatory.
- Users cannot proceed without selecting a registered agent option.

6. Address Information

- This step captures the **official business address** of the organization being formed.
- The address entered here becomes the **legal mailing address** used in state filings and official records.

Street Address

Customer's primary mailing address for records and documentation.

City, State, ZIP Code, Country

Used for identity verification and regulatory requirements.

Validation Rules

- Street Address → Required

- City → Required
- State → Required
- ZIP → Required & valid US ZIP format
- Country → Auto-filled (US)

7. Leadership Information

- This step captures the individuals who manage, control, or are legally responsible for the Non-Profit organization.
- The information entered here is required for state and federal government filing and will appear in official incorporation records.

To register the organization's leadership members such as:

- Directors
- Officers
- Authorized decision makers

State authorities require at least one responsible person to legally form the organization.

Purpose:

To capture and validate the identities of individuals who will govern the nonprofit organization and ensure compliance with state formation requirements.

- Populate Articles of Incorporation
- Generate state filing documents
- Validate legal eligibility
- Support compliance and tax-exempt documentation
- Maintain official leadership records

Behavior

- Admin can add one or more leadership members
- Each member entry is validated individually before saving
- Members are displayed in a structured table view
- Data is stored in the order draft
- Members can be edited before submission
- Members can be removed before final confirmation
- At least one leadership member is required to proceed

If no leadership member is added, the system prevents moving to the next step.

Board of Directors:

This section ensures that all directors' identity information and supporting documents are properly recorded.

User clicks the “Add Director” button in the Board of Directors section.

Clicking Add Director opens a modal titled “Add Non-profit Director”

Select From Company Director:

Options:

- Create New Participant
- Existing participants stored in the Company Directory

Behavior:

If user selects an existing participant:

- Identity fields are auto populated
- User can review the information
- User assigns Board Role
- User uploads supporting documents
- Save the director

If user selects Create New Participant:

- User must manually enter participant details.

Identity Details

This section collects personal information.

Fields:

- First & Last Name
- Date of Birth
- Email
- Phone

- Residential Address
- Country of Citizenship

Conditional Fields

SSN (Social Security Number)

Required when the country of citizenship is:

- U.S. Citizen
- U.S. Permanent Resident

Passport Number

Required when the member is a Non-U.S. person.

Role Specifics

Board Role

- Dropdown field

Example options:

- Director
- Chairperson
- Treasurer
- Secretary

This role determines the participant's designation in the Board of Directors list.

Supporting Documents:

Members may upload identification or verification of documents.

Fields:

- Document Type

Examples:

- Passport

- Driver License
- National ID

Document Number (Optional):

Reference number of documents.

- File Upload

Accepted file formats:

- PDF
- JPG
- PNG

Users must click Upload to attach the document.

Uploaded documents appear in the list below the upload section.

Save Director:

User clicks:

Save to Directory & Assign Role

System Actions:

- Save participant to Company Directory
- Assign Director role
- Add entry to Board of Directors list

Board of Directors View:

Each director card displays:

- Name
- Role
- Citizenship
- Edit Icon
- Remove

Edit Director

Trigger

- User clicks **the Edit** icon.

Behavior

- Opens **Edit Director modal**
- Existing data is pre-filled
- User can modify fields

After saving updated information reflects immediately in the Board of Directors list

Remove Director

Trigger

- User clicks **Remove**

Behavior

- After remove information reflect immediately in the **Board of Directors list**

Officers

Officers are responsible for managing the corporation's day-to-day operations.

Click **Add Officer** to open the **Add Officer modal**.

Identity Details

Same identity fields as directors.

Role Specifics

Position

Specifies the officer's position.

Examples:

- President
- Secretary

- Treasurer

8. Tax Exempt Status

- This step captures whether the organization will apply for federal and/or state tax-exempt recognition.
- The selections here determine the required forms, documentation effort, and additional fees included in the order.
- To define the nonprofit's tax classification path and prepare the appropriate IRS/state filing workflow.
- The system uses this information to calculate pricing, generate the correct application type, and schedule follow-up compliance tasks.

Available Choices

Federal Tax-Exempt Application

Admin selects one option:

- **Form 1023-EZ** — Simplified application for eligible small nonprofits
- **Full Form 1023** — Standard detailed IRS application
- **Not Applying Now** — Formation only; tax exemption handled later

State Tax-Exemption

Admin chooses whether to apply for state-level exemption (if supported in the selected jurisdiction).

Validation Rules

- Federal selection is mandatory
- Only one federal option allowed
- State exemption only enabled for supported states

9. Additional Offers

- This step allows the admin to add optional value-added services to the nonprofit formation order.
- These services enhance compliance, operational setup, and documentation beyond basic incorporation.
- Selections made here dynamically update the order total and become part of the final invoice.

The system lists available add-on services configured in the Service Catalog for nonprofit entities. Each card displays:

- Service Name
- Short Description
- Price (one-time or recurring)
- Add / Added button

Only active services appear on this list.

System Behavior

1. Admin clicks **Add** on a service
2. Service attaches to the order
3. Order total recalculates immediately
4. Button changes to **Added**
5. Admin may remove service before proceeding

Multiple services may be selected.

Validation Rules

- Add-ons are optional
- Same service cannot be added twice
- Recurring services must follow configured billing frequency
- Pricing updates instantly

10. EIN Application

This step collects the information required to apply for an **Employer Identification Number (EIN)** with the IRS.

If the customer chooses EIN filing, the system gathers the necessary data and prepares IRS Form SS-4 for submission.

This step ensures the business receives a valid tax identification number required for taxation, hiring employees, and opening business bank accounts.

It is applicable only when the EIN service is selected as part of the formation order.

The EIN Application step will be enabled only if:

1. The selected formation package includes EIN service, or
2. The user adds EIN service through Additional Services.

Step Information Display

The system displays formation details automatically, including:

- Legal Name
- Entity Type
- State
- Member count
- Tax classification

These values are synced from the formation data.

Responsible Party

User must select the Responsible Party.

IRS rule:

An individual who controls the business must act as the responsible party.

Fields:

- Select Individual (from formation participants)
- SSN / ITIN
- Checkbox if individual does not have SSN or ITIN

The party responsible must be an individual, not a company.

Business Physical Address

Users must provide the primary business operating address.

Fields include:

- Street Address
- City
- State

- ZIP Code
- County

Address may be synced automatically from formation details, but users may modify it if required.

Principal Business Activity

This section defines the business activity reported to the IRS.

Fields:

- Reason for applying (default: *Started a new business*)
- Business Description
- Accounting Year End

This information is used for IRS classification of business activity.

Principal Business Activity

This section defines the business activity reported to the IRS.

Fields:

- Reason for applying (default: *Started a new business*)
- Business Description
- Accounting Year End

This information is used for IRS classification of business activity.

Special IRS Requirements

Users must answer IRS compliance questions.

Questions include:

- Has this business entity ever applied for an EIN before?
- Does the business involve alcohol, tobacco, or firearms?
- Is the business required to file federal excise taxes?

These questions help determine additional IRS filing requirements.

Review & Sign

Users must review the EIN application and provide confirmation details.

Fields:

- Primary Contact Name
- Email for EIN delivery
- Phone Number
- Date

User must also check the Signature Declaration confirming the accuracy of the information.

11. Order Summary

- This step provides a complete overview of the nonprofit formation order before final confirmation.
- It allows the admin to verify all selections, services, and pricing to ensure accuracy before proceeding to review and payment.
- The system consolidates all previously entered data into a single readable summary.

Information Displayed

Organization Details

- Organization name
- State of formation
- Organization type
- Tax-exempt selection

Customer Details

- Customer name
- Email
- Phone number

Leadership Information

- List of directors/officers added

Selected Package

- Package name
- Base price

Additional Services

- Each add-on service
- Individual price

Pricing Breakdown

- Subtotal
- Filing fees
- Tax-exempt application fees
- Add-on services
- Total amount

System Behavior

- System compiles all order data
- Calculates total cost
- Displays itemized breakdown
- Allows admin to go back and edit previous steps
- Prevents submission if calculation fails

Validation Rules

- Package must exist
- At least one director required
- Customer must be linked
- Total must calculate successfully

12. Review Details

- This step presents a final, read-only preview of all nonprofit formation information before the order is submitted for billing and processing.

- To ensure the legal and operational details entered in previous steps are correct before creating the official order and initiating filing activities.
- This acts as a formal confirmation checkpoint to prevent incorrect government submissions.

Information Displayed

The system shows a consolidated view of:

Organization Information

- Organization name
- State of incorporation
- Organization type
- Mission and purpose
- Tax-exempt selection

Customer Information

- Customer name
- Email
- Phone

Address Information

- Registered business address

Leadership Details

- Directors/officers and roles

Selected Services

- Package
- Add-ons
- Fees and total amount

System Behavior

- System loads all stored order data in read-only format
- Admin reviews each section

- Admin confirms correctness (digital acknowledgment)
- Admin can navigate back to edit any section
- After confirmation, proceeds to payment options

Validation Rules

- Confirmation required before continuing
- All mandatory sections must be completed
- Any edited data updates automatically

12. Payment Options

- This step determines how the nonprofit formation order will be billed and finalized after review.
- The admin chooses whether to collect payment through an invoice or create an order without immediate payment.
- This provides flexibility for assisted sales, offline payments, or delayed billing workflows.

Available Options

1. Send Invoice

Admin prepares and sends a payable invoice to the customer.

Process

1. Admin reviews invoice details
2. System generates invoice number and due date
3. Email subject and message can be customized
4. Secure payment link included
5. Invoice emailed to customer

Result

- Order status → **Awaiting Payment**
- Customer pays through payment link
- Processing begins after payment

2. Bill Later

Admin creates orders without collecting payment immediately.

Process

1. Admin selects billing date
2. Optional reminder scheduled
3. Admin confirms order creation

Result

Order status → **Pending Payment**

- Billing handled manually later

System Behavior

- Generates financial record
- Locks order from editing
- Sends notifications (if applicable)
- Updates order workflow status

Validation Rules

- Payment option required
- Invoice requires valid customer email
- Bill Later requires authorized role
- Pricing cannot change after this step

13. Order Confirmation

- This is the final step of the Non-Profit Formation flow.
- After the admin selects the payment option and confirms the action, the system creates the order and displays a success confirmation.
- This step officially transitions the workflow from **data entry** to **order processing**.

System Behavior

After confirmation:

1. Order record is created in the database
2. Order status is assigned based on payment method:
 - a. **Invoice Sent → Awaiting Payment**
 - b. **Bill Later → Pending Payment**
3. Invoice is generated (if applicable)
4. Email notification sent to customer
5. Order becomes visible in Orders list
6. Fulfillment team can begin processing (based on payment status)

What the Admin Sees

The system displays a success popup indicating:

“Order Created Successfully”

Admin can close the popup and return to the Orders module.

C. Create Order for Business Formation Flow

Order Flow Steps

1. Select service type

- a. The user begins the order by choosing what kind of business formation they want to create
 - i. Company Formation (LLC, C-Corp, S-Corp, Non-Profit).
 - ii. Non-Profit Formation (Register a non-profit organization with tax-exempt status)
 - iii. Other Business Services (Additional services for your existing business)
- b. Based on this selection, the system prepares the correct legal workflow, required fields, and pricing logic for that entity type.
- c. Select a Business Services Flow

2. Select service type

- The selected customer becomes the legal contact, communication recipient, and account holder for the order and future compliance activities.
- The user can either select an existing customer record or create a new one.

Customer Selection Options

New Customer

Allows entering fresh customer details.

Used when the person placing the order does not yet exist in the system.

Existing Customer

The user searches and selects a previously created customer.

The system automatically loads saved contact details.

Field Behavior

First Name & Last Name

Identifies the primary owner/contact person for the order.

Email Address

Used for:

- Order confirmations
- Filing updates
- Compliance notifications

It must be unique for new customers.

Phone Number

Stored for operational communication and verification if needed.

Communication Preferences

Send account setup invitation to customer

If enabled, the system sends a portal access email after order creation.

Customer would like to receive occasional tips and updates

Opt-in for marketing or informational communication.

Validation Rules

- Mandatory contact fields must be completed
- Email must be valid format
- Existing customer selection prevents duplicate creation

3. Select Your Company

- The system loads all companies linked to the customer.
- Each company appears as a selectable card displaying company name, entity type, EIN, formation date, state, and status.
- Only active companies are selectable
- Admin selects one company by clicking the checkbox/card.
- The selected company becomes visually highlighted to confirm the choice.
- Only one company can remain selected at a time

4. Available Services

- After selecting a company, the system loads all available services applicable to that company type.
- Each service is displayed as a card showing **service name, description, and price**.
- Every service has an **Add to cart** button to include it in the order.
- When a service is added:
 1. The button changes state (e.g., *Added / Selected / Disabled*).
 2. The service is stored in the order of draft.
- Admin can select **multiple services** in the same order.
- Clicking the button again removes the service from the cart (toggle behavior) if removal is allowed.
- Pricing updates dynamically in the background order summary/cart.

5. EIN Application

It allows users to apply for an **Employer Identification Number (EIN)** through the Bloom365 platform without necessarily completing a company formation process within the system.

This module collects the information required to generate and submit **IRS Form SS-4**, which is used to obtain a federal tax identification number from the IRS.

The system supports two application contexts:

- Businesses **formed through Bloom365**
- Businesses **formed outside Bloom365**

Depending on the selected context, the form will either auto-fill business information or require manual entry.

This feature is available to:

- Existing Bloom365 customers
- Businesses that were formed outside Bloom365
- Admin users assisting customers with EIN applications

Users must have permission to access the EIN Filing Service.

Users must choose one of the following options:

Formed with Bloom365

- User selects an existing company from their dashboard.
- Business information is automatically populated using stored formation data.

Fields include:

- Company name
- Entity type
- Formation details

This reduces manual input and improves accuracy.

Formed Elsewhere

If the business was not created through Bloom365:

The user must manually enter company information.

Fields required:

- Legal Business Name

- Entity Type
- Date Business Started
- Trade Name / DBA (optional)

The **Entity Type dropdown** includes various IRS classifications such as:

- Sole Proprietor
- Partnership
- Corporation
- Nonprofit Organization
- Trust
- Government Entity
- Special Entity Types

This classification determines how the IRS processes the EIN application.

Section Details

1. Legal Entity Information

This section captures the primary legal identity of the business.

Fields:

Application Context

- Formed with Bloom365
- Formed Elsewhere

If formed with Bloom365:

- Select Company (dropdown from user dashboard)

If formed elsewhere:

- Legal Business Name
- Entity Type
- Date Business Started
- Trade Name / DBA (optional)

This information determines the business classification for IRS records.

2. Business Address

Users must provide the primary physical address of the business.

Fields include:

- Street Address
- City
- State
- ZIP Code
- County

This address is used by the IRS as the official mailing and operational location of the business.

3. Responsible Party

The responsible party is the individual who controls or manages the business.

IRS requirement:

The party responsible must be an individual, not a company.

Fields:

- Select Individual (from directory)
- SSN / ITIN
- Checkbox indicating the individual does not have a U.S. SSN or ITIN

This information is required for identity verification by the IRS.

4. Operations & Employees

This section describes the operational activity of the business.

Fields include:

Reason for EIN

- Default: Started new business

Accounting Year End

- Example: December (Fiscal Year)

Business Activity Description

- Selected from predefined categories

Employee Hiring Plan

Question:

Will you hire employees within the next 12 months?

Options:

- Yes
- No

This determines employment tax obligations.

5. Special IRS Requirements

This section contains IRS compliance questions.

Users must answer the following:

- Has this business entity ever applied for an EIN before?
- Does the business involve alcohol, tobacco, or firearms?
- Is the business required to file federal excise taxes?

These answers determine additional regulatory requirements.

6. Review & Sign

Before submitting the EIN application, the user must confirm the information provided.

Fields include:

- Primary Contact Name

- Email for EIN Delivery
- Phone Number
- Date

The user must also accept the **Signature Declaration**, confirming that the information provided is accurate and complete.

Submission

Once all required fields are completed and the declaration is accepted, the user can click:

Submit Securely

The system will:

1. Validate the application data
2. Generate IRS Form SS-4
3. Submit the EIN request through the Bloom365 EIN filing service

6. Review

- The system displays a consolidated **Order Summary** before payment.
- The selected **Company name** appears at the top for confirmation.
- All selected services are listed with:
 - Service name
 - Short description
 - Individual price
- The **Total amount** is automatically calculated and shown at the bottom.
- Each service includes a **remove (X) option**:
 - Clicking remove deletes the service from the order
- Total updates instantly
- The **Cart Summary indicator** shows the count of selected services.
- If no services remain after removal:
 - Proceed to Payment button becomes disabled
- Clicking **Proceed to Payment**:
 - Saves the order draft
 - Locks service selection

- Navigates to Payment Options step

7. Payment Options

- This step determines how the business services formation order will be billed and finalized after review.
- The admin chooses whether to collect payment through an invoice or create an order without immediate payment.
- This provides flexibility for assisted sales, offline payments, or delayed billing workflows.

Available Options

1. Send Invoice

Admin prepares and sends a payable invoice to the customer.

Process

1. Admin reviews invoice details
2. System generates invoice number and due date
3. Email subject and message can be customized
4. Secure payment link included
5. Invoice emailed to customer

Result

- Order status → **Awaiting Payment**
- Customer pays through payment link
- Processing begins after payment

2. Bill Later

Admin creates orders without collecting payment immediately.

Process

1. Admin selects billing date
2. Optional reminder scheduled
3. Admin confirms order creation

Result

- Order status → **Pending Payment**
- Billing handled manually later

System Behavior

- Generates financial record
- Locks order from editing
- Sends notifications (if applicable)
- Updates order workflow status

Validation Rules

- Payment option required
- Invoice requires valid customer email
- Bill Later requires authorized role
- Pricing cannot change after this step

8. Order Confirmation

- This is the final step of the Non-Profit Formation flow.
- After the admin selects the payment option and confirms the action, the system creates the order and displays a success confirmation.
- This step officially transitions the workflow from **data entry** to **order processing**.

System Behavior

After confirmation:

1. Order record is created in the database
2. Order status is assigned based on payment method:
 - a. **Invoice Sent → Awaiting Payment**
 - b. **Bill Later → Pending Payment**
3. Invoice is generated (if applicable)
4. Email notification sent to customer
5. Order becomes visible in Orders list
6. Fulfillment team can begin processing (based on payment status)

What the Admin Sees

The system displays a success popup indicating - **“Order Created Successfully”**

Admin can close the popup and return to the Orders module.

6. Constraints

- Customer can only view their own orders
- No editing of submitted order data
- Documents cannot be deleted by customer
- Status is controlled only by admin/system
- One order linked to one company
- Payment data is read-only
- Archived orders remain accessible
- Access revoked if account disabled

7. Integration Points

The order menu integrates with:

Customer Management

Used to authenticate the logged-in user and ensure they can only access their own orders

Order Management

Retrieves the customer's order list, order details, and overall progress information

Service Management

Provides real-time status updates for each service included in the order

Billing System

Supplies payment details such as totals, payment method, and payment status

Document Storage

Allows customers to securely view and download uploaded documents related to the order

Notifications

Sends alerts when customer action is required (e.g., pending information or updates)

Company Records

Displays official business formation data linked to the order

Reporting

Tracks customer activity and order lifecycle for analytics and auditing purposes

8. Quality Standards

Performance

- Orders list loads < 2 seconds
- Order details open < 1.5 seconds
- Documents download instantly
- Tabs switch without page reloads

Security

- Strict user-order ownership validation
- Signed document URLs
- No direct file path exposure
- PII protected
- Session validation on every request

Reliability & Usability

- Clear status badges
- Consistent layout across tabs
- Empty states handled (no documents / no services)
- Helpful messaging for Pending Info
- Graceful failure handling if document missing

Documents

1. What It Does – Core Purpose and Functionality

The **Documents module** provides customers with a centralized repository where they can access and download all documents associated with the companies assigned to their account.

This module enables customers to:

- View official business documents issued by government authorities
- Access documents uploaded by the customer or administrators
- Filter documents by company and document type
- Download documents securely from the platform

The module organizes documents into two logical categories:

- **Government Issued Documents**
- **Client Uploaded Documents**

This separation helps customers clearly distinguish between **official regulatory documents** and **documents uploaded by the customer for business purposes**.

The Documents module is **read-only**, meaning customers can only **view and download documents** but cannot upload, edit, or delete documents from this page.

2. Who Can Use It – Roles and Permissions

The **Documents module** is available to all authenticated users of the Bloom365 **Customer Portal**.

Unlike administrative modules, this module **does not rely on role-based permission configuration**. Every customer user will be able to access the Documents module after successfully logging into the portal.

Access to documents is determined by the **customer account association**, not by user roles.

Access Rules

To access the Documents module, the following conditions must be met:

- The user must be authenticated in the Bloom365 Customer Portal
- The user must belong to a valid customer account
- The user must have access to the customer portal

Once authenticated, the user can view documents associated with the companies assigned to their account.

Allowed Actions

Customer users can perform the following actions:

- View documents
- Download documents

Restricted Actions

Customer users cannot perform the following actions:

- Upload documents
- Edit document metadata
- Delete documents

Document visibility is automatically restricted to **companies associated with the logged-in customer account**, ensuring that users can only access documents relevant to their business entities.

3. Who Does It Apply To – Roles and Permission Assignment

This module applies to:

- Bloom365 customers
- Business owners using the customer portal

A customer may have **multiple companies assigned to their account**, and the Documents module allows them to access documents belonging to all those companies.

4. Preconditions – What Must Be True Before Use

Before a user can access the Documents module:

- The user must be logged into the Bloom365 Customer Portal
- The user must have at least one company associated with their account
- Documents must exist in the system for the associated companies

If no documents exist, the system should display an **empty state message indicating that no documents are available**.

5. Expected Behavior – Step-by-Step Flow

5.1 Accessing the Documents Menu

1. The user logs into the Bloom365 Customer Portal.
2. The user selects **Documents** from the left navigation menu.
3. The system loads the Documents page.

The page displays documents belonging to **all companies associated with the logged-in customer**.

5.2 Page Layout

The Documents page contains:

- Document category tabs
- Company filter dropdown
- Document search field
- Document type filter
- Document table listing available documents

5.3 Document Categories

Documents are organized into two primary categories:

Government Issued

Contains official documents issued by government agencies or regulatory authorities.

Examples include:

- Certificate of Formation

- EIN Confirmation Letter
- Business License

These documents are typically generated through regulatory filings and official government processes.

Client Uploaded

Contains documents uploaded by customers or administrators.

These documents may include supporting materials or identity verification documents.

Examples include:

- Identity Document
- Legal Document

5.4 Company Filter

The Documents module includes a **Company filter dropdown**.

Options include:

- All Companies
- Individual company names associated with the customer

Selecting a company filters the document list to show **documents belonging only to that company**.

5.5 Document Search

The search bar allows customers to search documents using keywords.

Search may match against:

- Document name
- Document type
- Associated company

Search results update the document table dynamically.

5.6 Document Type Filter

A **Type filter** allows customers to filter documents based on document type.

The available document types **change dynamically depending on the selected document category**.

Government Issued Document Types

When the **Government Issued** tab is active, the following types are available:

- Certificate of Formation
- EIN Confirmation Letter
- Business License

Client Uploaded Document Types

When the **Client Uploaded** tab is active, the following types are available:

- Identity Document
- Legal Document

5.7 Document Table

The Documents page displays documents in a structured table.

The table contains the following columns:

- Document Name
- Type
- Company
- Issued By
- Actions

Document Name

Displays the name of the document and may include the document creation or issue date.

Type

Displays the type of document based on the selected category.

Company

Displays the company associated with the document.

Some documents may also display additional company information such as the jurisdiction.

Issued By

Displays the issuing authority or organization responsible for the document.

Examples include:

- IRS
- State Secretary of State
- Bloom365 system

Actions

The Actions column contains a **Download icon**.

5.8 Document Download Behavior

When a user clicks the **Download icon**:

1. The system opens the document in a **new browser tab**.
2. The document is displayed using the **browser's default document viewer**.
3. The user can download the document using the browser's download functionality.

This behavior allows customers to **view the document before downloading if needed**.

6. Constraints – Rules and Limitations

The following constraints apply:

- Customers cannot upload documents from this page
- Customers cannot modify document metadata

- Customers cannot delete documents
- Documents are scoped strictly to companies assigned to the customer account
- Document type options depend on the selected category

7. Integration Points – How It Connects to Other Menus

The Documents module integrates several other system components.

Company Management

Provides company associations for each document.

Orders & Fulfillment

Generates certain documents such as formation certificates and EIN confirmation letters.

Compliance Services

Provides regulatory compliance documents.

Document Storage Service

Responsible for secure storage and retrieval of document files.

8. Quality Standards – Performance and Security Targets

Performance

- Documents page loads within **2 seconds**
- Document search results update within **1 second**
- Document download should initiate within **1 second**

Security

- Documents are accessible only to authenticated users
- Users can access documents only for their assigned companies
- Secure document storage and encrypted transfer must be enforced

Reliability & Usability

- Clear labeling of document categories and types
- Graceful handling of missing or unavailable documents
- Consistent download behavior across browsers

Subscriptions

1. What It Does

- The Subscription menu allows customers to view and manage the ongoing services attached to their company after formation.
- It provides visibility into the active plan, billing cycle, and optional add-on services that can be purchased anytime without creating a new company order.
- Customers can enhance their business support services such as compliance monitoring, EIN assistance, annual reports, and other recurring services directly from this page.
- The menu serves as the self-service maintenance center for the customer's business after onboarding.

2. Who Can Use It

Customer (logged-in portal user only)

3. Who Does It Apply To

Customers who have at least one successfully formed company in Bloom365.

4. Preconditions

- Customer account exists
- Customer owns at least one company
- Company formation order is completed
- Subscription plan is assigned during checkout
- Billing menu is active

5. Expected Behavior

Viewing Subscription

- System displays active subscription plan
- Shows status (Active / Expired / Suspended)
- Displays start date and next billing date
- Shows included services

Viewing Add-On Services

- System lists all available additional services
- Already purchased services appear as Added
- Available services show Add button

Adding a Service

When the customer clicks Add:

- Service attaches to subscription
- Billing entry is created
- Service becomes active
- Button changes to Added
- Future invoices include the service

6. Constraints

- Same service cannot be added twice
- Services require active company status
- Subscription cannot be modified for inactive company
- Billing recurrence follows configured plan (monthly/yearly)

7. Integration Points

- Billing & Invoice menu
- Compliance Schedule menu
- Service Catalog
- Company Management

8. Quality Standards

- Page loads under 2 seconds
- Real-time activation after adding service
- No duplicate purchase allowed
- Billing reflects changes immediately

Billing History

1. What It Does

- The Billing History menu allows customers to view and manage all invoices generated for their services within Bloom365.
- It provides a centralized financial record where customers can track payment status, review charges, and download invoice documents at any time.

The primary purpose of this menu is to:

- Give customers transparency into all charges related to their companies and services
- Allow customers to verify whether payments are unpaid, partially paid, or paid
- Provide downloadable invoice records for accounting and tax purposes
- Reduce support dependency by enabling self-service access to billing data
- Allow customers to complete pending payments directly from the payment list by displaying a **“Pay Now”** action for invoices with **Unpaid** status, which navigates the user to the **Payment Page** to complete the payment

This menu does not process payments directly; it serves as a billing visibility and document retrieval interface.

2. Who Can Use It

This menu is accessible only to authenticated customer users.

Allowed Users:

- Account Owner
- Authorized Company Members (if granted portal access)

All logged-in users under the customer account can view invoices related to their companies.

3. Who Does It Apply To

Applies to:

- Customers who have placed an order
- Customers with generated invoices
- Customers with subscription or recurring services

If no invoices exist, the menu displays an empty state.

4. Preconditions

Before accessing Billing History:

- User must be logged into the customer portal
- At least one order must exist in the system
- Billing/invoice must be generated by the platform
- Customer must be mapped to a company or service

5. Expected Behavior

Viewing Billing History

1. User clicks **Billing History** from the side navigation
2. System loads a table containing all invoices
3. Each invoice row displays:
 - a. Company reference
 - b. Invoice date
 - c. Total amount
 - d. Payment status (Paid / Unpaid / Partially Paid)
 - e. Download option

Invoice Status Indicators

- **Paid** → Payment completed successfully
- **Unpaid** → Payment pending
- **Partially Paid** → Partial payment recorded

If the **Status = Unpaid**, a "Pay Now" button should be displayed in the **Action** column.

Clicking the **Pay Now** button navigates the user to the **Payment Page** to complete the payment for the selected Payment ID.

Download Invoice

1. User clicks the download icon
2. System generates or fetches the invoice PDF
3. File downloads to the user's device

Pagination

- User can navigate between pages
- Rows per page configurable

6. Constraints

- Users cannot edit invoice data
- Users cannot delete invoices
- Only invoices belonging to the logged-in account are visible
- Historical invoices remain accessible permanently
- Invoice amounts cannot change after generation

7. Integration Points

This menu integrates with:

- **Orders & Fulfillment** → Generates invoice entries
- **Payments Menu** → Updates payment status
- **Subscription Menu** → Recurring billing records
- **Documents Menu** → Invoice PDF storage
- **Customer Account Menu** → Access control

8. Quality Standards

Performance

- Invoice list loads within 2 seconds
- Download starts within 3 seconds
- Pagination responds instantly

Security

- Only account-authorized invoices visible
- Secure file download (authenticated access)
- No direct public URL access to invoice files
- Payment data protected and read-only

Reliability & Usability

- Clear status badges (Paid/Unpaid/Partial)
- Consistent invoice formatting
- No duplicate invoices displayed

Settings

1. What It Does:

The **Settings** menu allows customers to **manage and maintain their personal account information and authentication credentials** within Bloom365. It serves as the central place for customers to:

- View and update personal profile information
- Manage contact details associated with their user account
- Change their account password securely
- Protect against accidental data loss through unsaved-change handling

This menu is **account-focused**, not company-focused. All actions performed here apply to the **logged-in user profile**, not to any specific company.

2. Who Can Use It:

- The Settings menu is accessible to **all authenticated customer users**
- There are **no role-based, license-based, or permission-based restrictions**
- Access to Settings cannot be disabled or limited

Every logged-in customer can access and manage their own settings.

3. Who Does It Apply To:

This menu applies to:

- **Individual customer users** managing their personal Bloom365 account

There are:

- No roles
- No permission flags
- No shared or delegated access

Each user can manage **only their own profile and credentials**.

4. Preconditions – What Must Be True Before Use

Before accessing the Settings menu:

1. The user must have a **valid Bloom365 customer account**
2. The user must be **successfully authenticated**
3. The user session must be active

If authentication expires, the user must re-authenticate before making changes.

5. Expected Behavior – Step-by-Step Flow

5.1 Accessing Settings

1. User logs in to the Bloom365 customer site
2. User navigates to **Settings**
3. The system loads the user's current profile and security details

5.2 Profile Information Management

The user can view the following profile attributes:

- Full name
- Email address
- Phone number

Behavior:

- Existing values are pre-populated
- User may modify only the phone number
- Changes are saved only when explicitly confirmed

5.3 Password Management

The user can update their account password by:

1. Providing the current password
2. Entering a new password
3. Confirming the new password

Behavior:

- All password fields are mandatory for password updates
- New password and confirmation must match
- Password update is processed only after validation

6. Constraints – Rules and Limitations

- Users can update **only their own profile information**
- Profile changes do not affect company-level data
- Password updates require current password validation
- Settings cannot be used to manage roles, companies, or subscriptions

7. Integration Points – How It Connects to Other Menus

The Settings menu integrates with:

- **Authentication & Identity Menu**
 - User verification and password management
- **User Profile Service**
 - Storage and retrieval of personal information
- **Session Management**
 - Ensures changes are tied to active sessions
- **Notification Service** (optional)
 - May trigger confirmations or alerts for sensitive updates

8. Quality Standards – Performance and Security Targets

Performance

- Settings page should load within **2 seconds**
- Save and update actions should complete within **1 second**
- No full logout or session interruption for profile updates

Security

- Access restricted to authenticated users only

- Passwords handled securely and never exposed
- Strong validation for credential updates
- Protection against unauthorized account modification

Reliability & Usability

- Clear feedback for successful and failed updates
- Graceful handling of validation errors
- Robust protection against accidental data loss
